WHAT IS IT?

An online Back-Up is a method of automating the storing and saving of your data over the internet on to a remote server.

WHAT ONLINE BACK-UP DOES

An online Back-Up service will back up your data files, emails, applications and even your server roles.

By continuously backing up your data online to a remote server, the risk of catastrophic data loss as a result of fire, theft, file corruption, or other disaster is practically eliminated.

Online Back-Up to a remote server away from your office takes out the human involvement of having to change back up tapes or disks and mitigates against human error.

TIME SAVING

Managing, maintaining and upgrading your local Back-Up can be a huge drain of time and resources. Investing in online Back-Up can pay dividends in allowing you to concentrate all your time and resources in running your business.

• An automated • online back- • up to a remote • server takes • out the human • involvement

ADDED VALUE

When the unthinkable happens and your server goes down or critically important files are lost an online back-up service gives you peace of mind.

- Full critical server roles can be restored within hours.
- File data can be restored in minutes.
- If your server is down your online Back-Up service provider can facilitate user access via the internet or deliver a fully restored physical server to your business within hours.
- Unlimited retention of all data back-ups that can go back weeks, months or years.

THE BENEFITS OF ONLINE BACK-UP SERVICES

An online Back-Up service is critical to protecting your business data and has many benefits including:

You can Back-Up as often as required i.e. daily or even hourly.

Keeps your critical business roles and data secure.

The Back-Up is scheduled and automated.

The Back-Up is monitored every day to ensure it is up-to-date without errors.

Avoids single point of failure/human error.

A scalable service that can easily increase or decrease in capacity as required.

You are billed monthly, quarterly or annually which can help with cash flow and financial planning.

You do not need to continually upgrade any back up software.

Regular test restores can be carried out to ensure data integrity.
